

TOP OR FRONT LOAD WASHERS

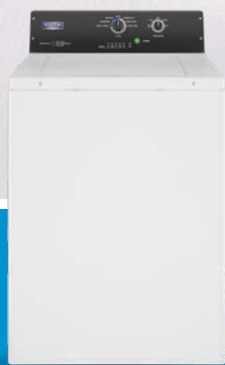

WHAT'S THE DIFFERENCE?

Maytag's Commercial Top and Front Load Washers are both built tough and designed to outlast the competition, but that is where the similarities end.

Maytag's Commercial Top Load Washer has a centre Agi-Peller for you to load your linens around, sweeping the linens across the Agi-peller for washboard like cleaning. Where else Maytag's Commercial Front Load washer use less water, utilising gravity to clean your linen's, the inner drum spinning back and forth to pick the linens in and out of the water to provide a scrubbing like cleaning action.

Maytag's Commercial Front Load Washers have super short cycle times, use less water & power, clean better than top load washers and will also have your linens coming out dryer due to a higher extraction speed, saving you time in the dryer or on the line.

MAT20MN Top Load Washer

8.5kg Capacity
